ONE COMMITMENT.
A BRIGHTER TOMORROW.

College of Computer Studies

Technology for People. Innovation for a Better Society.

Learn.
Create.
Collaborate.
Serve.

Welcome to the CCS Website!

Explore. Learn. Innovate. Be a Lasallian IT Professional!

The College of Computer Studies (CCS) is dedicated to developing competent, ethical, and service-oriented professionals in the field of computing. Guided by Lasallian values, we strive to provide quality education, relevant skills, and meaningful experiences that prepare our students for the challenges of a digital world.

HCI-Based Prototype Improvement Plan: CCS Website Interface

This document outlines the human-computer interaction (HCI) plan for redesigning the College of Computer Studies (CCS) website prototype. The proposed enhancements optimize user experience, consistency, and visual clarity while integrating the upper-center layout and interactive feedback requirements.

Overview of HCI Principles Applied

HCI Principle	Current Interface Issue	Proposed Redesign Plan
Visibility of System Status & Navigability	Navigation is isolated in a legacy left sidebar; interactive elements lack clear state feedback.	Move main navigation to upper-center; add dynamic hover/active visual feedback to all interactive buttons.
Consistency & Standards	Inconsistent layout tables, contrasting colors, and varied text styles across sections.	Establish a uniform CSS grid layout, consistent component styling, and a standardized color palette.
Recognition Rather Than Recall	Text-dense lists increase visual cognitive load when searching for key services.	Incorporate intuitive icons, clear card containers, and logical visual grouping for instant visual scanning.
Aesthetic & Minimalist Design	Cluttered layout with legacy elements (e.g., hit counter)	Increase padding/white space, simplify background colors, and move

HCI Principle	Current Interface Issue	Proposed Redesign Plan
	taking up prime real estate.	secondary metadata to the footer.

1. Visibility of System Status & Navigability

- **Upper-Center Main Menu:** Relocate the primary sidebar navigation menu (*Home, About CCS, Programs Offered, Faculty & Staff, Academic Calendar, Downloads, etc.*) to a prominent horizontal navigation bar situated at the top-center of the screen.
- **Active State Indicators:** Use visual indicators (such as a high-contrast accent underline or colored highlight tab) to clearly signal the user's current location within the website hierarchy.
- **Interactive Button Feedback:** Provide real-time interactive states for all buttons and navigation items:
 - **Default State:** Clean, readable typography over subtle container background.
 - **Hover State:** Smooth CSS color transitions (e.g., Lasallian green accent), subtle shadow elevation, and interactive mouse cursor change (cursor: pointer).
 - **Active State:** Tactile micro-interaction feedback (e.g., transform: scale(0.98)) upon user click.

2. Consistency and Standards

- **Standardized Layout Grid:** Replace fragmented visual sections and embedded layout tables with a flexible, responsive multi-column CSS grid framework. Maintain consistent margins, section spacing, and card padding.
- **Unified Design System:** Shift away from mixed fonts and high-contrast yellow/green accent boxes. Adopt a cohesive brand color palette featuring deep Lasallian green (#005A36), clean neutral grays, and crisp white card containers paired with modern sans-serif typography (e.g., Inter or Roboto).
- **Predictable UI Components:** Standardize news alerts, announcements, and quick links into uniform card containers featuring consistent call-to-action (CTA) buttons (e.g., "Read More", "View All").

3. Recognition Rather Than Recall

- **Iconography & Visual Hints:** Pair key menu entries and quick-access categories with intuitive visual icons (e.g., calendar icon for *Events*, document icon for *Downloads*, graduation cap for *Programs*) to facilitate fast scanning.
- **Structured Information Zones:** Organize information into distinct, predictable zones:
 - Top branding and institutional identity bar.
 - Upper-center primary navigation menu.
 - Hero visual banner with prominent announcement callouts.
 - Academic program cards and activity feeds arranged below.

4. Aesthetic and Minimalist Design

- **Visual Decluttering:** Remove unnecessary design noise, such as background gradient fills and legacy elements like the visitor hit counter.
- **Footer Integration:** Move non-critical metadata, copyright details, visitor counts, and legal links into a clean, structured full-width footer at the bottom of the page.
- **Whitespace Optimization:** Increase breathing room and padding around text blocks, headings, and images to reduce user visual fatigue and direct focus toward high-priority
